

## PARTICIPANTS NEEDED

### For Study Investigating Neuropathic Pain in Spinal Cord Injury

A PhD research project is looking for adult volunteers to participate in a research study using electroencephalography (EEG).

The project requires healthy volunteers to take part in the same experiment that will also be performed with spinal cord injured patients. EEG is a non-invasive method of recording the electrical activity of your brain. During the session we will record your EEG whilst asking you to imagine performing some movements.

If you are:

- 18-80 years of age
- An English speaker
- Have no self-reported neurological conditions

and interested in taking part, then please email [k.anderson.3@research.gla.ac.uk](mailto:k.anderson.3@research.gla.ac.uk) for more information!

The experiment will take **up to 2 hours** and will be held in the **Rehabilitation Engineering Lab, Room 363**, of the James Watt South Building, University of Glasgow. You are welcome to visit the lab and ask any questions before you make a decision.
